No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                       700

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov or see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           VECTOR: pCYPAC2
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP4-529P3. Actual start of this
clone is at base position 1 of RP4-726N20; actual end is at 127447
                                                                                                                                                                                    Submitted (11-JAN-1999) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis, MO 53108, USA 4 (bases 1 to 127447) Waterston, R.H.

Submitted (13-JAN-2006) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Jan 23, 2006 this sequence version replaced gi:74136772.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the fature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). ONDE: This is a 'working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Exic D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University denome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GIB/CHR7, send mailto:egreen@nhgri.nih.gov or see http://genome.wustl.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTICE: This sequence may not represent the entire insert of this forms. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 0); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The clone sequenced to the right is RPI1-332C7, 200 bp overlap. Actual start of this clone is at base position 1 of RPI1-22601 actual end is at base position 172379 of RPI1-22601. Location/Qualifiers

NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 'note="match to EST BM021296 (NID:g16535652) ie75d01.y1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Data from AC048378, AC025490 and AC010954 was used to finish the clone, AC093671. Single plasmid region exists between 150675 and 150731.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence was finished as follows unless otherwise noted:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Center: Washington University Genome Sequencing Center

It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        16.5%; Score 115.2; DB 12; Length 212421; ilarity 87.5%; Pred. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q2D bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 00); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                     Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              repeat_region
                                                                                                                                      The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and Coworkers at the Roswell Park Cancer Institute
                                             Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                       VECTOR: pBACe3.6
BIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is AC005150, 2000 bp overlap.
Actual end of this clone is at base position 135692 of RPII-402D23.
                                                                                                                                                                                                                                                                                                                                                      Polymorphisms have been identified between AC005150 and RP11-402D23.
                                                                                                                                                                                                                                                                                                                                                                                                         1. .135692

It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as as soon as it is available and the accession number will be preserved.

Identifying a subject at risk of melanoma, useful for treating or preventing melanoma by detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample

The new invention relates to the discovery that polymorphic variations in a gene (ADY94258) encoding a BRAF protein kinase is associated with the occurrence of melanoma. BRAF is a serine/threonine protein kinase and is a member of the RAF family. It participates in the RAF/RAF/MEK/ERK/MAP kinase signal transduction pathway. The BRAF gene is located on chromosome 7q34 (assembly 30). Provided are methods of identifying a pubject at risk of melanoma by detecting the presence or absence of one or more polymorphic variations in BRAF associated with melanoma in a nucleic acid sample from a subject. Also disclosed is a method of an incident polymorphic variation associated with melanoma. Also disclosed is a method of an incident polymorphic variation associated with melanoma. Also disclosed is a method of identifying a candidate molecule that modulates cell proliferation by introducing a test molecule to a system which

comprises the nucleic acid; and determining the presence or absence of an interaction between the test molecule and the nucleic acid or protein. The polymorphic variations are detected at one or more positions in a DV94258. The positions are in linkage disequilibrium with one or more positions in SEQ ID No. 1, or the variation is the haplotype CTTG or ATGA in ADV94258. Detecting the presence or absence of the one or more polymorphic variations comprises hybridizing an oligonuclectide to the nucleic acid sample, where the oligonuclectide hybridizes to a region adjacent to the polymorphic variation. The proximal polymorphic variation is within a region between about 5 kb 3' of the incident polymorphic variation or variation and about 5 kb 3' of the incident polymorphic variation contact and about 5 kb 3' of the incident polymorphic variation.

Treating melanoma in a subject alternatively comprises contacting one or more cells of a subject with a duplex RNA nucleic acid. The invention is useful for treating or preventing melanoma. The present sequence is the DNA sequence of the human BRAF gene. 146060 146120 146300 146360 146420 146480 ö 180 120 300 360 480 Sequence 190276 BP; 55599 A; 35097 C; 37143 G; 62425 T; 0 U; 12 Other; 146001 CIGTITCACATAAAGITITITITITITITITGATGATTATAAAAATATCATITITITITIT 146181 TTTTAGTGACAGTTTTAGTCATTTTCCTAATTGAAAGTATCATAAGTAATCTAAATTT 121 TATATACATGTGCCATGCTGTGTGCTGCACCCATTAACTCACATGAAGTTTTTTTAAA TITIAGIGACAGITITIAGICATITICCIAATIGAAAGIATCATAAGIAATCCATAAATTT GAAAAAAATGTTAACTCTGATAAAAAAGTTTTATAGTTTCCTACTTTAAGCAAAAT 146421 TAATTGATTTTACCAAATTTCCATGGAACAAGCAAGGTTGGCTATTTTTGGATTGATAT 541 GGAGTTTAGATAGCTAAAGTATAATTTTATTTGTGATTTAATAATGGTATGGAGTTAGGGC ATTAAGCCTAGTAAGTATAATTTAATATTGTCAAATAATTTGGAAAATACCATGGGTACT TAATTGATTTTACCAAATTTCCATGGAACAAACAAGGTTGGCTATTTTTGGATTGATAT TITGAAATACTAGTACAGGAATATCATTGTTAGTTGAATTTTTAGCCTTAGAAAACAAAT Gaps DB 14; Length 190276; .. 0 Indels Match 100.0%; Score 700; DB 14; Local Similarity 99.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            63
                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention

Ruben SM (HUMA-) HUMAN GENOME SCI INC. Rosen CA, Barash SC,

Nucleic acids encoding 973 human testicular antigen polypeptides, useful for preventing, diagnosing and/or treating testicular cancer. WPI; 2001-483232/52.

The present invention provides the protein and coding sequences of 973 human testicular antigens, and fragments of their genomic sequences. The Disclosure; SEQ ID NO 2861; 766pp; English

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases. WPI; 2001-541565/60

Rosen CA, Barash SC, Ruben SM

Disclosure; SEQ ID NO 11432; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating comedical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, constant cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointeetinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, commultiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as wyccardial ischaemias; (d) wound healing confections diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        repeats (CMNRS). The genes are useful for the development of an antibody against MSI-H (hugh microsatellite instability) tumour. Also described: [1] cDNA genes containing cMNRs with 10 or more nucleotide sequences, and selected from the cDNA genes having the nucleotide sequences of SEQ ID NOS:1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41 and 41; (2) cDNA genes, which are frameshift mutated by deletion or insertion of one or more base in the cMNRs; (3) genomic DNA genes containing cMNRs with 10 or more nucleotide sequences, and selected from the genomic DNA genes having the nucleotide sequences of SEQ ID NOS:2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42 and 44; and (4) genomic DNA genes, which are frameshift mutated by deletion or insertion of one or more base in the cMNRs. The genes have cytostatic activity. The present sequence represents an MSI-H carcinoma genomic DNA sequence from the present invention.
                                                                                                                                    63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Genes containing coding mononucleotide repeats are useful in developing an antibody against MSI-H (hugh (sic high) microsatellite instability)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes genes containing coding mononucleotide

This invention relates to novel polynuclectides encoding human secreted proteins. Specifically, it refers to the vectors, host cells, recombinant and synthetic methods for producing human polynucleotides, polypeptides and antibodies. Furthermore, it relates to screening methods to identify agonists and antagonists that can be used to inhibit or enhance the production and function of the secreted proteins. The present invention corrections of the secreted proteins. The present invention provouction and function of the secreted proteins. The present invention corrections as cancer, haematopoietic diseases including proventing disorders buch as cancer, haematopoietic diseases including protein inquinal hernia, musculoskeletal diseases including protein inquinal hernia, musculoskeletal diseases including carrinary incontinence and renal disorders, neural or sensory disease including archyphmia and hypernatraemia, mixed fetal diseases including fetal alcohol syndrome and bown's syndrome, excretory diseases including curinary incontinence and renal disorders, neural or sensory disease including diabetees and gomerulonephritis, respiratory disease including portal hypertension and irritable bowel syndrome and connective tissue or cipithelial diseases including scleroderms and connective tissue or cipithelial diseases including carritable bowel syndrome and connective tissue or cipithelial diseases including carritable disease, and anti-arritable diseases unclaimed and pomerulonephritis, digestic anti-arritable.

Tumour suppressor gene derived chemically modified sequence #27

(first entry)

18-DEC-2001

Human; tumour suppressor gene; oncogene; antitumour; cytostatic; cancer;

```
The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and oncogenes bisulphite, of genes associated with tumour suppression and oncogenes busing from the sequence litting) sequences (Ss) and sequences complementary to (Ss). The nucleic acid may be a peptide nucleic acid-oilgomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state and/or single nucleide polymorphisms and also to be used in an array for analysing probes can also be used in a method for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therappy of existing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or epigenetic parameters, the differences serving as basis for diagnosis and/or epigenetic parameters, the differences serving as basis for diagnosis and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The present sequence is one of the 513 genomic sequences detain electricia control form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1726 GITATITITITITITITITITITATATAAGATITATAATGGATAATGGATTITIATITIT 1785

```
The invention relates to a nucleic acid comprising a sequence (I) of at least 18 bases in length of a segment of chemically pre-treated genomic CC least 18 bases in length of a sequences of (ARX31919-ARX3402) or its complement. Also included are an oligomuclectide or peptide nucleic acid (or set thereof) of at least 9 nucleotides which hybridises to (I), probes for detecting cytosine methylation or single-conclected polymorphisms (SNP) in (I), an array of oligomers or peptide nucleic acids for analysing diseases associated with the methylation of states of the CpG dinucleotides of (I). The array is useful for determining genetic and/or epigenetic parameters, classification, differentiation, grading, staging, treatment and/or diagnosis of astrocytomas, or the predisposition to astrocytomas by analysing cytosine (a strocytomas, or the predisposition to astrocytomas by analysing cytosine methylations, involves obtaining a biological sample containing genomic DNA, extracting the genomic DNA, converting the genomic DNA, extracting the genomic DNA, converting the genomic DNA fragments using the array and a polymerase, where the another base which is dissimilar to cytosine in terms of hybridisation containing methylation status of one or more cytosine positions, and analysing methylation status of one or more data sets. The genomic DNA is chemically treated by using a blanlificate multifice or disulphite. The amplification status of the analysing methylation status of the constitution status of brain the specific genomic methylation status of brain cissue, based on the specific genomic methylation status of brain cissue, based on the specific genomic methylation status of the amplificates are detechable molecule fragments having a typical mass constitution and analysing methylation are detected in a mass spectrometer. The requestion status of the amplificates are detectable molecule fragments and entering an analysing methylation are detected in a mass spectrometer. The requestion of the specific parameters is a spect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               pre-treated genomic DNA to be amplified, have a single positive or angative charge for a better detectability in the mass spectrometer. Preferably, the amplificates or fragments of the amplificates are detected by matrix assisted laser desorption/ionization mass spectrometry
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              form part

| Sequence 622, Application US/09949002
| Patent No. 6900016
| GENERAL INFORMATION:
| APPLICANT: VENTER, J. Craig et al.
| TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
| TITLE OF INVENTION: WITH INFLAMMATORY AUTOIMMUE DISEASE, METHODS OF DETECTION
| TITLE OF INVENTION: AND USES THEREOF
| FILE REFERENCE: L0000790
| CURRENT APPLICATION NUMBER: US/09/949,002
| CURRENT FILING DATE: 2000-01-28
| PRIOR APPLICATION NUMBER: 60/231,401
| PRIOR APPLICATION NUMBER: 60/231,401
| PRIOR APPLICATION NUMBER: 108/23|

Sequence 15654, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VERTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOCTHARE: PESESEQ for Windows Version 4.0

LENGTH: 194889
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             19330 TTTATTATTTTÄTTÄTTÄTTÄCÄČTTTTÄÄGTTTTÄGGSTÄCÄTGTGCACAATGTGCĞĞ 19271

Sequence 15754, Application US/09949016

Patent No. 681239

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFRENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 363033

| Sequence 13420, Application US/09949016
| Patent No. 681239
| GENERAL INFORMATION:
| APPLICANT: VENTER, J. Craig et al. |
| TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
| TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
| TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
| CURRENT APPLICATION NUMBER: 60/241,755
| PRIOR APPLICATION NUMBER: 60/241,755
| PRIOR APPLICATION NUMBER: 60/237,768
| PRIOR APPLICATION NUMBER: 60/231,498
| PRIOR FILING DATE: 2000-10-03
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       439 rinaagiririagggracargracaargracaggriagriagarargracargracargracarg

Sequence 14577, Application US/09949016

Sequence 14577, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WIMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FRAESEQ for Windows Version 4.0

SEQ ID NO 14577

LENGTH: 678533
